

# Eagle Technologies Opens New Metro Detroit Office for Advanced Test Systems

Eagle Technologies has expanded its capabilities with the opening of the Eagle Test Systems Group, which will operate from an office in Metro Detroit. Eagle will execute test systems capabilities from a new location in Plymouth, MI, just 20 minutes from Detroit Metro Airport.

**BRIDGMAN, Mich., April 17, 2020 (NewsWire.com)** - Eagle's new Detroit office will strengthen the company's partnerships with global manufacturing suppliers and make it an even more attractive choice for end users and part suppliers across a vast number of industries. The test systems facility, located on North Haggerty Road, is just 25 miles from downtown Detroit and breathing distance from Interstate 275.

Eagle will facilitate sales and software development related advance test automation from its Detroit office, from initial sales and concept to end-of-line testing simulations. The leased office is Eagle's third location in Michigan, with two other manufacturing facilities in nearby Saint Joseph and Bridgman, respectively.

The new location boasts best-in-business amenities, including a sales conference room and demo space for customers. Manufacturing equipment covers leak test, assembly validations, functional test, NVH, cleanliness, and vision systems (gear pattern reading, dimensional, and color). Controls engineering, mechanical engineering, and manufacturing will still be executed from Eagle's facilities in Bridgman and St. Joe for test systems equipment.

"With Eagle Test Systems Group, we become an attractive option for companies looking to work with a single supplier capable of meeting all of their automation requirements," says Partner, Chief Operating Officer Brandon M. Fuller. "With its assembly and advanced test capabilities, Eagle now expands our capabilities into a unique position in our industry."

Eagle Head Test Engineer Bob Ussery will preside over the new Test System Group in Plymouth. Ussery has worked on test systems for most of his career. His team will consist of software engineers, who will bring expertise in NI Labview, NI Test Stand, testing and analysis algorithms, data acquisition, and CANbus protocol hardware and software.

With more than 50 years of automated systems experience and \$90 million annual sales, Eagle

Technologies continues to redefine how factory assembly equipment should be made. The company's new Plymouth office will strengthen its reputation as a world-class and innovative provider of test systems solutions.
