

Eagle Technologies Opens New Support and Service Office in China

BRIDGMAN, Mich., April 20, 2020 (NewsWire.com) - Eagle Technologies is pleased to announce that it has opened a new office in China for installations, warranty, service, and production start-up support. The new office opening is part of Eagle's global expansion as it builds on its 50 years of automated systems experience.

Eagle is committed to providing assembly and test systems globally. As the company grows, it has opened a centralized location in China for design and build opportunities in Asia, as well as enhancing service, sales and support. The new office is located in Guangdong, China, just 50 miles from the airport in Shenzhen, 60 miles from Guangzhou, and 80 minutes from Hong Kong.

Eagle has customers from every corner of the globe, including the United States, China, and Europe. The Asia office was chosen to meet the demands of Eagle's ever-growing global operations. The facility spans 30,000 square feet of leased space and boasts a 20-foot ceiling entrance.

This is the second Eagle office to open in 2020. The company recently opened a third location in Michigan, which will serve as a hub for its advanced test systems capabilities. The location in Plymouth, Michigan, just 20 minutes from Detroit Metro Airport, has become the headquarters for Eagle's Test Systems Group. Eagle's Electric Vehicle demo machine at the Innovation Center is located in San Jose, California.

Both of Eagle's new China and Plymouth offices will strengthen the company's partnerships with customers around the world.

"As you know, Eagle has extensive experience in designing and building electric vehicle assembly equipment. To date, our reach has been limited to the U.S. That said, the demand for advanced test and electric vehicle machinery is exploding globally, especially in Asia," says Chief Operating Officer Brandon M. Fuller. "To stand out from competing OEMs, our plans must include Asia-based machine installation assistance, start-up and production support, and warranty and service capability on equipment installed overseas."

With more than 50 years of automated systems experience and \$90 million annual sales, Eagle

Technologies continues to redefine how factory assembly equipment should be made. The company's new Asia office will strengthen its reputation as a world-class and innovative provider of automation technologies.
